

# ***Dynamic Documentation***

## ***Pre-Test Answers***

1. *Documentation of patient contact and care provides a means of quality assurance and historical information about a particular event.*
  - a. **True**
  - b. False
2. *EMS providers should view the task of documentation as one of \_\_\_\_\_ importance.*
  - a. Minimal
  - b. **Utmost**
3. *Documentation must be completed for every patient contact.*
  - a. **True**
  - b. False
4. *You're dispatched to a local residence for an unknown problem. While en route to the scene, dispatch tells you the police have arrived on scene and there is no problem at the residence, cancelling you from the call. This event does not require completion of a patient care report.*
  - a. True
  - b. **False**
5. *Information obtained during the interview process of the patient, bystanders, or witnesses of an event should be documented in the \_\_\_\_\_ portion of the patient care report narrative.*
  - a. **Subjective**
  - b. Objective
  - c. Assessment
  - d. Plan
6. *Information obtained upon inspection, palpation, auscultation, percussion, and diagnostic testing should be documented in the \_\_\_\_\_ portion of the patient care report narrative.*
  - a. Subjective
  - b. **Objective**
  - c. Assessment
  - d. Plan

7. *The SOAP template on PDA Medic must be used and left unedited when writing the narrative portion of the patient care report.*
- a. *True*
  - b. *False*
8. *If a Preliminary Medical Report Form is filled out, signed and left with the receiving hospital's emergency department, a fax of the complete patient care report must still be sent.*
- a. *True*
  - b. *False*
9. *Which of the following providers must contact Medical Control prior to accepting a low risk refusal?*
- a. *EMT-First Responder*
  - b. *EMT-Basic*
  - c. *EMT-Intermediate*
  - d. *EMT-Paramedic*
10. *After a refusal has been obtained, which copy of the refusal advice form does the patient or guardian receive prior to termination of contact?*
- a. *Gold*
  - b. *Pink*
  - c. *White*
  - d. *Yellow*
11. *You respond to a private residence for a victim of sudden cardiac arrest. Upon arrival at the scene, you find a patient lying on the living room floor unresponsive, pulseless, and apneic with CPR being initiated by members of your crew. Attempts to use the monitor/defibrillator fail due to the battery being dead. After 2 minutes a new battery is placed and the patient is successfully defibrillated. Since defibrillation was successful, no incident report would be required.*
- a. *True*
  - b. *False*
12. *In order to decrease errors when documenting, the patient care report should be read or re-read by members involved in the incident prior to submission.*
- a. *True*
  - b. *False*
